

The process for my MS 1 Project:

- Begin a new repository - kinsofasgård-ms1. Make sure you add the CODE Institute template.
- Open a workspace.
- Set-up index.html file, fan page.html and fail-page.html (make sure it is in the ROOT directory. If you do not do this you will end up with a “fatal- could not find file” message).
- Set-up fan-wall.html make sure it is in the ROOT directory. If you do not do this you will end up with a “fatal- could not find file” message).
- Set-up the assets folder » inside set-up css + images folders.
- Within css folder» set-up style.css file.

Initial set-up

Okay we are ready to start.

- Open the index.html file and add the boilerplates
- Within the <body> element, create a <header>, <article>, <section> and <footer> element. This is going to be the standard for the three html files have set up in our main directory.

In the style.css

- Add the font link at the top of the page. We will be using Amatic SC and Robot as the second.
- paste `@import url('https://fonts.googleapis.com/css2?family=Amatic+SC:wght@400;700&family=Roboto&display=swap');`
- Start by adding our general body element - a uniform font-family and font-color.

Header

- Back to Index.html
- Lets then start on the <header> in the index.html folder.
- Next we will add a three column .container class from Bootstrap.

```
<nav class="container-fluid">
  <div class="container">
    <div class="row">
      <div class="col-sm">
        One of three columns
      </div>
      <div class="col-sm">
        <h1>One of three columes</h1>
      </div>
      <div class="col-sm">
        One of three columns
      </div>
    </div>
  </div>
</nav>
```

*(The reason I am doing this is to have 3 columns: One with a navbar on the on the left, image in the center and another external link on the right. - my achievement is to be able to have this minimise in Mobile to accommodate just the band logo and a hamburger icon.)

Image:

Now let us test out our image. And we will try first a Bootstrap code. We will use the Responsive image code. Save and check.

```

```

- **Result:** does not work the way I want it. It is disproportionate in response. The image looks a little small on the large size and then enlarges on the smaller sizes. It does not in Bootstrap this may not work on Explorer but I am using Chrome and it still does not work properly. I

decided to wrap the image in a container and a row. I also went back again to Bootstrap and this time used the below code to center the image.

```

```

- I then went into style.css and targeted img the width 300px and height 100px. It looks like the image holds proportionately and centred. In addition I nested the in a <a> tag with a link to index.html.
- However: I would like to add a hamburger icon to the right-hand side. Therefore the image needs to decrease in size in order to fit the hamburger icon on the right-hand side. When I tried to minimise the image adding a class with a width and height percentage it created some problems with horizontal alignment of the <div>s.
- To combat this I decided to use a class .header-inline-block with a display: inline-block, in style.css to target all the columns so as to keep the div elements inline. I also added a media query with max-width 575.98px in style-css (decreasing the width to 200px and height to 68px - 3/1 proportion). I also added float: right to keep it on the right hand side. This works and the image responds to the size change very well as well as creating space for the hamburger bar on the right.
- In order to have the
- Validated and checked on the browser - so looks good.

• Bug fix

```
<header>
  <nav>
    <div class="container-fluid">
      <div class="row">
        <div class="header-inline-block col-sm">
        </div>
        <div class="header-inline-block col-sm">
          <a href="index.html">
            </a>
          </div>
        <div class="col-sm header-inline-block">
          One of three columns
        </div>
      </div>
    </div>
  </nav>
</header>
```

```
$ git commit -m "Add band logo image to header, align and make responsive."
$ git push
```

Mini navbar & Fanwall/Hamburger button:

- I have added an list with which will represent Home /The Band/ The Legend internal links.
- In order to keep the row aligned we will add the Bootstrap class of .list-inline which will be followed by the list-inline-item class in each element.
- A <a> link will be nested in each with the corresponding href.
- I also want to vertically center the bar so that it is not in the corner too much. So I will add a .menu class and add a padding-top of 40px (bringing the line of text down and a text-align of center.
- Let us test on screen. It works and responds well. But the font has now turned blue and needs to be a bit **bolder**. Probably a default of the <a> link. That we will work on later when we do the styling.
- Now let us work on the responsiveness. We want the to disappear in mobile mode so we are going to add the display classes of .d-none .d-sm-block. Test on browser - and it works!

```
<div class="menu header-inline-block col-sm d-none d-sm-block">
  <ul class="list-inline ">
    <li class="list-inline-item"><a href="index.html">Home</a></li>
    <li class="list-inline-item"><a href="index.html">The Band</a></li>
    <li class="list-inline-item"><a href="index.html">The Legend</a></li>
  </ul>
</div>
```

- Now let's work on "The Fanwall" link and add the hamburger toggle. I quite like the effect created on the Whisky project so I will probably take the same Javascript link from Bootstrap.
- First we add <a> link "The Fanwall" link.
- I want our link text to be centred with a padding-top of 40px (so that it is flush with the Home menu on the left. So we will add the .menu class. Test browser. And it works. It is also a blue colour and has an underline when the cursor is positioned over it, but **I will style that later after we have done the hamburger button toggle.**
I am going to place the same display setting for the "The Fanwall" link as I did with the aligned links on the left. That would be .d-none .d-sm-block. And it works - the link "The Fanwall" disappears in mobile mode.
- I see there is a lot of space with the image on the left so I will remove the size change which means the size will remain the same in mobile mode.

\$ git add .

\$ git commit -m "Add nav links on left, align links. Add Fan wall links to left and align. Add class menu to style css."

Validate code : all good.

Hamburger toggle.

- Okay let us battle the toggle on the right side.
- I quite like the effect created on the Whisky project so I will probably take the same Javascript link from Bootstrap. We also have to make sure that it aligns with the band logo image. But that we will work on later.
- I will add this to the bottom of the code before the </body>

```
<script src="https://code.jquery.com/jquery-3.3.1.slim.min.js" integrity="sha384-q8i/X+965DzO0rT7abK41JStQIAqVgRVzpbzo5smXKp4YfRvH+8abtTE1Pi6jizo"
crossorigin="anonymous"></script>
<script src="https://cdnjs.cloudflare.com/ajax/libs/popper.js/1.14.6/umd/popper.min.js"
integrity="sha384-wHAiFfRIMFy6i5SRaxvfOCifBUQy1xHdJ/
yoi7FRNXMRBu5WHdZYu1hA6ZOblgut" crossorigin="anonymous"></script>
<script src="https://stackpath.bootstrapcdn.com/bootstrap/4.2.1/js/bootstrap.min.js"
integrity="sha384-B0UglyR+jN6CkvvICOB2joaf5I4l3gm9GU6Hc1og6Ls7i6U/mkkaduKaBhlAXv9k"
crossorigin="anonymous"></script>
```

- Then after I will add <button> element so that I can make the button. and i have decided to use the code primarily from the Whisky Drop website - how ever I am going to make a few changes to conform with my website.
- So I watched the video again to get more information and to isolate the code I required.
- I pasted the <nav> code under the image code.
- I removed the <a> links associated with the Whiskey Website and added my four links; Home, The Band, The Legend and The Fanwall.
- In the <nav> element I removed navbar-expand-sm as it was not responding well with positioning with the image.
- I decided to rather add in style.css as z-index of 2, position: absolute, right:0 , top:0 to the class of navbar instead. And this worked better for me. **Bug-fix.**
- I removed the link for the Whiskey Drop.
- In the <button> element I changed the ml-auto to just auto so that the hamburger button was more aligned the right.

- In the element I changed mr-auto to just auto so that the dropdown aligned right.
- Tested - looks okay - we just have to align the toggle bar a little better.

git add .

git commit -m "In index.html add inline unordered menulist to header. Add navbar and navigon (hamburger button) to left side. Add responsive features to all in style css and index.html."

```

32 | <nav class="navbar navbar-light bg-light">
33 |   <button class="navbar-toggler" type="button" data-toggle="collapse" data-target="#navbarNavDropdown" aria-controls="navbarNavDropdown" aria-expanded="false" aria-label="Toggle Navigation">
34 |     <span class="navbar-toggler-icon"></span></button>
35 |     <div class="collapse navbar-collapse" id="navbarNavDropdown">
36 |       <ul class="navbar-nav auto">
37 |         <li class="mr-2 nav-item"><a class="nav-link" href="index.html">Home</a></li>
38 |         <li class="mr-2 nav-item"><a class="nav-link" href="index.html">The Band</a></li>
39 |         <li class="mr-2 nav-item"><a class="nav-link" href="index.html">The Legend</a></li>
40 |         <li class="mr-2 nav-item"><a class="nav-link" href="famwall.html">The Famwall</a></li>
41 |       </ul>
42 |     </div>
43 |   </nav>

```

Added some styling:
• In style.css I add a media query for min-width 576px for class .navbar

and add a display: none.

- I removed bg-light from the <nav> element so that there is no background for the hamburger toggle. - I changed this later as it did not allow the dropdown text to show. so i made it transparent instead.
- Changed .navbar-toggler-icon in the to a font awesome class .fa fa-water. looks a bit more rugged.
- In the .navbar class added right: 19px, top: 10px to give some space, text-align: center
- Added to id #band-logo-img padding-top: 10px for some breather at the top.
- Added a class.general-font with color: ivory, font-size: 25px, font-weight: bold.
- Added a general font size for all a links.
- **Testing** Now I check responsiveness especially across 4 apple devices (iPhone 5, iPhone 11, iPad and desktop).
- In our case I had to decrease the size of the band-logo image and remove some excess padding in order to fit and align. the hamburger button and image

\$ git Add .

\$ git commit -m "Add extra responsive measures for toggle navigon (hamburger icon). Add font color,weight and size to general fonts."

- Add background color and check font sizes and colors in header.
- Add id attribute #bg-header, background-color: rgba(0, 0, 0, 0.8). it is back with some transparency but we will have to see if it has any affect on the toggle. The reason for this is that I added a transparent background to the dropdown menu on the hamburger icon.I have then.
- **Testing** checking the responsiveness and I am just not happy with the band logo image. It is just too big and does not work with the responsiveness that well, especially on the larger devices. I will make the logo 200px X 68px to make it easier to respond. **Bug fix.**
- Also see that the text of both the list on the fanwall are now not responding to size changes on larger devises so I will again break them down and see where the issues lies.
- I also changed the background to black so that it is uniform and easier to look at.

Okay so this has taken way too much time so I am going to start from scratch again.

I deleted the old code above and left the footer skeleton (I had previously).

Header

- Add to style.css the font styles I will use Amatic SC and Roboto.
- Add a body element with font-family.
- Add Navbar with toggle from bootstrap.
- add element and add koa-bandlogo.jpg to the element. include alt="king-of-asgard-band_logo"

- Set width to 210px and height to 70px.
- **Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.**
- Next remove toggle border and toggle icon.
- Found a code in Stack overflow to do this.

```

navbar-toggler,
.navbar-toggler:focus,
.navbar-toggler:active,
.navbar-toggler-icon:focus {
  outline: none;
  border: none;
  box-shadow: none;
}

```

- I will add a water icon from font-awesome because I think it goes better but this may change.
- And change the font color to reflect an Ivory . I will target this in style.css with:

```

button span i{
  font-size: 30px;
  text-align: center;
  color: ivory;
}

```

- **Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.**
- It has changed the fonts of the navbar to Amatic but has not affected the color. Would like to change this. **Bug**
- **Change navbar-expand-lg to sm.**
- **Remove bg-light.** I heard from my colleagues that this is a way to change the font in Bootstrap Navbar.
- **Change to class .navbar-light to .navbar-dark.**
- **Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.**
- Add class .bg-navbar to add custom background of green so that i can see the nave bar.
- Change the navbar to float right changing to ml-auto instead of mr-auto.

\$ git commit -m "Add font-family to style.css. Add bootstrap template & add changes . Add image to index.html."

- Change navbar text to Home / Band/ The Legend/ The Fanwall!
- Add dropdown to " The Fanwall!
- From this I used the dropdown toggle from Bootstrap and added the extra pages.
- **Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.**

Time to validate our code and - Great we are good with both HTML and CSS formats.

So all that needs to be done with the Header is styling so lets sort out our footer.

\$ git commit -m "Add dropdown menu to navbar. Add text to the navbar menu."

Footer

- Okay let us work on the footer. I have some previous code that I used that worked so i will keep that at the end.

```

<ul class="list-inline media-links">
  <li class="list-inline-item"><a href="https://www.facebook.com" target="_blank"><i
    class="fab fa-facebook" aria-hidden="true"></i><span class="sr-only">Facebook</span></a>
  </li>
  <li class="list-inline-item"><a href="https://www.twitter.com" target="_blank"><i
    class="fab fa-twitter" aria-hidden="true"></i>
    <span class="sr-only">Twitter</span></a>
  </li>
  <li class="list-inline-item"><a href="https://www.soundcloud.com" target="_blank"><i
    class="fab fa-soundcloud" aria-hidden="true"></i>
    <span class="sr-only">Soundcloud</span></a>
  </li>
  <li class="list-inline-item"><a href="https://www.instagram.com" target="_blank"><i
    class="fab fa-instagram" aria-hidden="true"></i><span
    class="sr-only">Instagram</span></a>
  </li>
  <li class="list-inline-item"><a href="https://www.spotify.com" target="_blank"><i
    class="fab fa-spotify" aria-hidden="true"></i>
    <span class="sr-only">Spotify</span></a>
  </li>
</ul>

```

- So first up we will copy and paste the 3 column container from Bootstrap and make it class .container-fluid.
- Then since we have text we can now see where our content can lie.
- First the tough part we are going to make a full element button to so that potential Concert / festival organiser.
- Left hand column will be our space.
- I have taken the drop-up "Contact Us!" Bootstrap component and mixed it with a form.
- I have first added a button toggle code in the first col-sm div.
- So I added the <form> portion below the button toggle and is ready to make adjustments
- I duplicated the email input field and change the duplicated field to "Full Name"
- Copy "text-area" code from CV project
- The submit button still needs to be style but <i can do that at a later stage*
- I added a close button at the top, however i need to make that bigger as it is difficult to see.
- Also the "required" field is not working so need to find out why- **Bug fix**
- Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.
-

Now the social links container.

- I will grabbed the template I made and added the corresponding style.css markup.
- all the href's have been added and the styling done.
- At first the space it was occupying was too big so I made the columns col-2/col-8/col-2.
- I also changed the font-size of the social links to create a little more space.
- Save & Test on browser, check response iPhone/ iPad and Desktop. looks good.

\$ git commit -m "Add content to footer. Create contact form and button. Create social links that hover."

- **Added styling to "Contact Modal"**

The Front Page

- Right now to create the call out and background picture. and then we are going to add a gig list perhaps a poppet modal a competition tag.
- Before I do that I am going to create in the Navbar a 1) Contact us! tag and 2)a Sign in/ Sign-up tag.
- For "The Contact Us!" tag , i have copied out the code form the footer and changed some of the id attributes so that they did not say the same.
- Save & Test on browser, check response iPhone/ iPad and Desktop. looks good BUT the dropdown menu on the iPhone 5 is way to big and the user has to move down to see it. i will have to make that smaller. Also the dropdown menu is moving to the side on **Bug fix**
- Also I added a media query for "the Contact Us!" tag in the footer and the tag now disappears after 576pxs so it does not show any issues until you zoom minimize so i will have to have a look at that. **Bug fix -I added a display -block so that it only shows up in the menu.**

\$ git commit -m "Copy form from dropout contact tag on footer & paste into navbar. Add tablet blocker for footer contact tag."

The background picture

- Okay first made a class .container -fluid div. and within that one row and one col.

- I created a class .bg-front-container that sits in the class occupied by the container-fluid.
- In style.css and gaining some idea from the whiskey backdrop in the project .
- I copied the .bg-front-container class into style.css added the following below

```

}
/*-----Front-----*/
.bg-front-container {
  background: url('../images/koa-band.jpg') ■ black no-repeat center center fixed;
  -webkit-background-size: cover;
  -moz-background-size: cover;
  -o-background-size: cover;
  background-size: cover;
  overflow: auto;
  max-width: 100%;
  height: 1000px;
}

```

- Added nav-container to the <nav> element and included a position of fixed tin style.css. I may not keep this but it is good to have.
- **Save & Test on browser, check response iPhone/ iPad and Desktop. Olay but now i notice the footer is unevenly spaced . I will have to decide on the Contact Us button. Also would like to add a close button to bottom of navtoggle Bug fix I just removed the legend button. that will have to wait.**
- I will start by adding a section element and then pasting in the three-column bootstrap container.
- the right side will be the competition sign-up and the left will be a hidden giglist to optimise space. in the center will be a music file.
- I also copied a version of their song Einharjar into a “Audio” folder I set up in the assets folder. i am aware that this file is very big as audio is always but we will try optimise it later .

\$ git commit -m "add music folder & Einharjar.m4a to repository. Add background image koa-band.jpg & style on style.css"

Time to validate our code and - Great we are good with both HTML and CSS formats.

****On all the forms I would have liked to have added a remark after someone submits a form to inform them that it has been sent.

- Next change Audio control, found a basic control on stack overflow from Vishal Basumatary. **Credit but actually it does not look nice so I deleted it.**
- **I also removed Twitter and added Youtube as they are frequently on Youtube.**
- **Now my background does not show. Okay it seems i had position relative on my image that was restricting it from appearing. Bug fix**
-

Adding Jumbotron to left container area.

```

class="container fluid bg-front-container">
<div class="front-space-container">
</div>
<div>
  <div class="row">
    <div class="col-sm">
      <div class="jumbotron">
        <h1 class="display-4">Hello, world!</h1>
        <p class="lead">This is a simple hero unit, a simple jumbotron-style component for calling extra
          attention to featured content or information.</p>
        <hr class="my-4">
        <p>It uses utility classes for typography and spacing to space content out within the larger
          container.</p>
        <a class="btn btn-primary btn-lg" href="#" role="button">Learn more</a>
      </div>
    </div>
    <div class="col-sm">
      <span>Our Latest Single - Einjarhar</span>
      <audio id="player" src="#">Eihhar Jar</audio>
      <div>
        <button onclick="document.getElementById('player').play()">Play</button>
        <button onclick="document.getElementById('player').pause()">Pause</button>
        <button onclick="document.getElementById('player').volume += 0.1">Vol +</button>
        <button onclick="document.getElementById('player').volume -= 0.1">Vol -</button>
      </div>
    </div>
  </div>
</div>

```

-
- Add the text content “ Win a Signed Guitar!” and below the “Sign Up /Sign-In” button in <small> I added “To be added to a draw” to Jumbotron.”
- Added class .jumbotron to style.css and added the following to make adjustments. i wanted the background to be a little more transparent a little but still have a style.

```
.jumbotron {
  color: rgba(224, 172, 26, 0.8);
  text-align: center;
  font-family: 'Roboto', sans-serif;
  background-color: rgba(0, 0, 0, 0.8);
  border-radius: 0;
  justify-content: center;
  margin: 0;
```

- [border-radius on btn—mld is = Bug-fix](#)

```
}
```

- **Save & Test on browser, check response iPhone/ iPad and Desktop. looks good so far.**
- **Now the modal for the sign up/sign In.**
- **Copy modal bootstrap code and add this to the my code in the jumbotron- under the button.**
- i took the modal code from bootstrap and added it to the bottom of the <body >. i removed the button or link form the jumbotron and added the button link from bootstrap before styling the button with a btn—jbt class.
- again i borrowed the css code form Stack overflow and changed it adding the btn—jbt class.
- Made the button transparent.
- now to add the form for the modal.
- Made the appropriate changes :
- add Full Name/ Email Address/ radio button with I am over 18 yrs of Age.
- ‘I feel lucky! button and a reset button (i sort this out from the coffee project.
- Add media query for Jumbotron for Sign up?????
- remove 2nd jumbotron form style.css.
- padding =0 / background -color = 0.6 from sign-up jumbotron.
- border-radius :0 for button .btn—jbt
- removed text from small sign-up print on jumbotron.
- consider color change. Dark blues or greens etc
- **Save & Test on browser, check response iPhone/ iPad and Desktop. It looks okay.**

\$ git commit -m "Add jumbotron for sign up form on front page. Add modal to jumbotron and personize. Add form to jumbotron."

Right-side gig list

- Add dropdown link menu from Bootstrap and personalise to gig list that is active. Change the button to follow the same design

\$ git commit -m "Remove legend navbar-link. Remove contact us navbar link from footer."

-
- Add dark drop-down menu for Gig list. Add back ground to column.
- [Dropdown does not work. Bug-fix](#)
- [I grabbed another dropdown menu from another project.](#)
- create .gig-list class and add the following:

```
.gig-list {
  text-align: center;
  font-weight: 400;
  font-family: 'Roboto', sans-serif;
  padding-left: 3px;
  padding-right: 3px;
}
```

*****Right - Chatted to Jo from tutor support and there is no fix other than to make the contact a modal. Which we will try.*****

>>>Added modal to contact Us instead - looks better. but need to be styled. Copy old contact Us form and paste into modal

- Remove old audio player for time being.

For the gig-list I have decided to go for a modal too as this will be more efficient for space. Somewhere in the mix i add a container at the top of the the gig-container. to push down the gig list content. Added .space-container class with setting 800px - but now moved down to 300px.

- Next - we will add another jumbotron and a link to a modal. Pasted it above the sign-up modal.
- Now will add another container at the top to push it down- then i will work on the size and alignment and then hopefully style up. Actually looking at it now i think i will add another column to - making them both col-sm-6. They will sit along side each other.
- Change the header size to H4.
- Went back into bootstrap and copied the list component in the model. it has links so that when the user clicks on the link they are sent to the the fail page which they can then return to the main page.
- Now add the content.

\$ git commit -m "Change contact us! navbar dropdown - modal. Create new gig-guide in front page - jumbtron>modal>bootstra list>add href to fail-page."

Save & Test on browser, check response iPhone/ iPad and Desktop. It looks okay.

Validate CSS & HTML - all good!

Finish Styling after Band page.

Band Page

- setting up the <article> and in that a <section class="container-fluid"> then we will add a <header> With the Band. and under that a div or a container with some text about the band.
- Then we will add a row and columns .
- Within the columns add the bootstrap cards.
- And adjust the size and center content (changed width: to 10 rem) and perhaps add padding too the row.
- Had issue with a border on the right-hand side of the of the front page. Added to the <section> container fluid.And it works. **Bug fixed.**
- Add the id attribute #intro-band-header to <h1> and #intro-band-text with the following changes.
- Add content to <h1> and <p> and then add:

```
#intro-band-header {  
  color: darkgreen (this is just for visibility);  
  font-size: 50px;  
  font-weight: 700;  
  text-align: center;  
}
```

```
#intro-band-text {  
  color: darkgreen (this is just for visibility);  
  font-size: 50px;  
  font-weight: 700;  
  text-align: center;  
}
```

- Add the id attribute #band in <section> with the following changes.

```
#band {
  background-color: pink (for visibility);
  height: 600px; 700px
}
.card {
  font-family: 'Roboto', sans-serif;
  border-radius: 0;
  border: none;
  background-color: rgba(0, 226, 170, 0.8);
}
```

- Save & Test on browser, check response iPhone/ iPad and Desktop. It looks okay but we need to give some space separation under each card, as all cards are clumped one on top of the other. I added a padding-top of 20px

```
<div class="col-sm-3" style="padding-top: 20px;">
  <div class="card" style="width: 10rem; margin: 0 auto;">
    
    <div class="card-body">
      <p class="card-text">Some quick example text to build on the card title and make up the bulk of
        the card's content.</p>
    </div>
  </div>
</div>
```

Okay now we will add the images and see what happens.

- Save & Test on browser, check response iPhone/ iPad and Desktop. Look good - but now i have a white space under the images i have to take care of. **Bug fix**

\$ git commit -m "Add The Band page below front page. Add header, text and card (bootstrap) to band page. Add styling and adjustments esp. padding top to cards. Add return home link."

\$ git push

Validate CSS & HTML - all good! Save & Test on browser, check response iPhone/ iPad and Desktop.

- Add content to the cards. - if time permits I may add a image transition to the card for a better experience.
- .Style the page. rgb(59, 58, 58) for the background, rgba (224, 172, 26, 0.6) and ivory for the text
- . change font size for gig jumbotron in front page.
- add href 's to the navbar with connection to the other pages/ also changed for to robots - looks better.
- Clean up styling on all Modals and make them consistent.

Sign-up Modal

- .btn—mdl - change to (224, 172, 26, 0.6)
- change body element to Roboto with color of dark slate gray.

- Once all styling has been done we can con

```
section {
  padding-top: 50px;
  padding-bottom :50px;
}
```

- changed the color of the return Home link.

```
#return-text a {
  color: rgba(224, 172, 26)
}
```

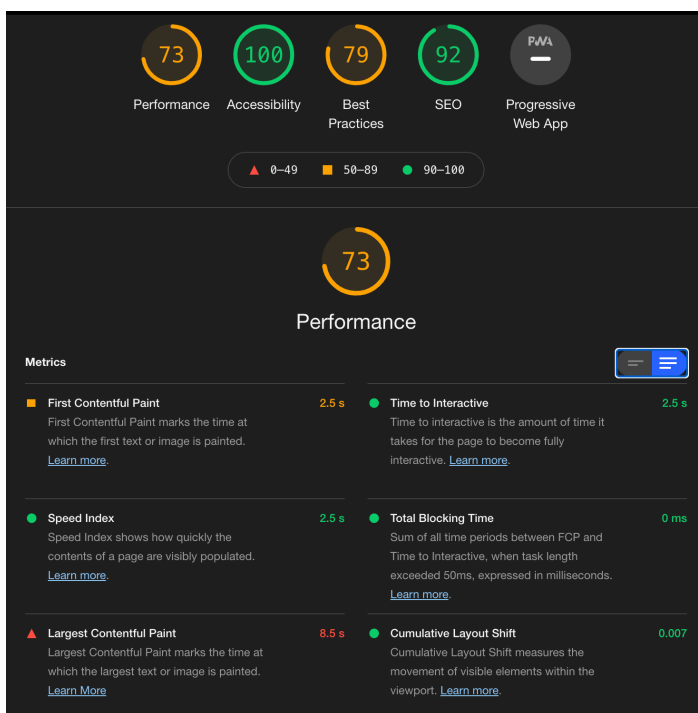

gig-list modal - copied jumbotron and set up gig-jumbotron class- as i will be using this for a media query.

```
.modal-body {  
  font-family: 'Roboto', sans-serif;  
  border-radius: 0;  
}
```

Bug fixed Required not working on modal!!! - I just copied the form from “contact us”
And neither is border radius =0

\$ git commit -m “Change contact us! navbar dropdown - modal. Create new gig-guide in front page - jumbotron>modal>bootstrap list>add href to fail-page.”

- sorting out Audio bar.- adds ound bar in separate dive and styled text
- Save & Test on browser, check response iPhone/ iPad and Desktop. It looks good except the margin in between the band images.
- Added new images for the band page - previous ones were a bit too blurry.
- **Bug fixed: I have added padding to min-width: 100% to .card class.**
- Going to add a min width: 100% and a min-height- 100%.
- Lower the padding to 10px on .card.
- Also add a class called .band-topspace and gave it a margin top of 20px.

When I take the audio out:

- I have decided I do not want the audio to be in the middle of the page as it is a distraction -
- Added media query to the classes below. so that there is more space on the mobile version - specifically iPhone 5.

```
@media (max-width: 575.98px) {
```

```
  .gig-jumbotron {  
    font-size: 10px;
```

```

    margin-top: 100px;
}

.gig-display {
    font-size: 25px;
}
}

```

Now removing the Audio file to see if it will push up my lighthouse score.

- instead embedded a code form Spotify and adjusted. - for this I used the website [Route](#)
Note. It did not work that well- or not at all.

\$ git commit -m "Add rel="noopener" to all <a> links. Add new images to band page. Add greater margin & Padding on Band-cards. Add media queries to jumbotron."

Fanwall

Header

- change the navbar text to reflect the new location. add new drop down tags to "Home " of gig list .

```

<a class="dropdown-item" href="fanwall.html"></a>
    <button type="button" class="btn btn--nsu" data-toggle="modal" data-
target="#exampleModal">
    Sign Up!

```

Add gig-list to Navbar as a modal.

Fanwall Container:

Bug-fixed! All Headers change- The header is not center-aligned.

```

*h1{
    color: rgb(135, 140, 175);
    font-size: 50px;
    font-weight: 400;
    text-align: center;
    text-emphasis: none;
}

```

```

#fan-header-margin {
    margin-top: 70px;
}

```

- copy and paste section index.html onto fanwall.html.
- remove change the styling on the text headers from id's to Classes- eg:
- create a class from a previous class on index.html .bg-front-container to .bg-fan-container.
 Change image.
- move the title " Fanwall" lower so that it is under header.
- Add media to fanwall- perhaps quotes from fans.
- include - fan-mail scroll bar. With block quotes. will include a scroll from the coffee-project.
- Add image to block quote. Add .fan-quote class with uniform color

\$ git commit -m "Add image blur-joa-band to images.Change txt to fanwall headers. Change fanwall navbar to reflect new page."

Validate CSS & HTML - all good!

Save & Test on browser, check response iPhone/ iPad and Desktop. So far it looks good.

- copied <iframes> from Spotify and added them to the three containers- will style that later.

Cool Stuff

- Add background to the section.
- Make sure the
- add the content - text to the headers.
- Add the images - can be the same format as the. The band page
- Add carousel to page and page images. - this took too long to load so i have now opted for the cards instead- trying to keep it simple.
- Add text content to merchandise.

Skål

- Copy paste content from "cool stuff.
- Add three rows of three columns from bootstrap and add images from facebook using the image link address. I tried the link address and the pictures failed to load.

\$ git commit -m "Add images to Cool Stuff, set-up section Skål. Add styling for Cool Stuff and Skål to style.css. Add audio to fanwall-page."

Validate on W3 and jigsaw. All good.

- Take gallery template from bootstrap.
- Add images.

\$ git commit -m "Add README.md summary & UX content. Add fan mail block quote to Fanwall. Move git list to navbar in mobile mode on index.html & fanwall.html."

Bug fixed: background on front page enlarged on mobile devices. I change the size to Vh and this seemed to take care of the problem.

Bug Fixed : Audio sound bite not corresponding with jumbotron - fixed it with clearfix from W3 schools.

\$ git commit -m "Add header, footer and background to failpage. Adjusted audio control front page index.html. Adjusted background image fanwall page."

Validate on W3 and Jigsaw: All good!

Fail Page

- Copy front page to HTML and remove unwanted code.
- Add jumbotron from bootstrap and add link to Youtube clip.
- Add image to background.

Bug fix:

- Save & Test on browser, check response iPhone/ iPad and Desktop. looks good BUT the dropdown menu on the iPhone 5 is way too big and the user has to move down to see it. i will have to make that smaller. Also the dropdown menu is moving to the side on **Bug fix**
- Also I added a media query for "the Contact Us!" tag in the footer and the tag now disappears after 576pxs so it does not show any issues until you zoom minimize so i will have to have a look at that. **Bug fixed -I added a display -block so that it only shows up in the menu.**

Bug Fixed : Audio sound bite not corresponding with jumbotron - fixed it with clearfix

git commit -m "Add content to Overview Bugs, in Testing.md. Adjust bg-front-container class for mobile"
